Smart security from your smart device

Secure remote system management with UltraSync™

Control
on the go

UltraSync is the secure cloud communication solution.
Offering easy connectivity for quick installation.
UltraSync mobile app lets users control their UltraSync Ready products from anywhere, any time. Available for both iOS and Android devices, UltraSync offers an intuitive interface with advanced capabilities, so users can easily initiate system actions and react to disturbances all from their mobile device.

Completely convenient security and automation from one app

With UltraSync, users can remotely interact with UltraSync Ready communicators and ZeroWire™ systems. From their mobile device, users can easily access and control their home security systems:

- Arm and disarm their system
- Receive alarm reports via push notifications and email
- Geo-fensing
- Manage user accounts
- Control Z-Wave® lights, locks and thermostats

- Watch live streaming video and event-based clips
- Create temporary user codes for contractors or visitors
- Check system event history
- Create and manage scenes

Dealers and installers can even use the app for system configuration and programming.

UltraSync,
ultra secure

ultraSync

Quick and easy home system integration

When the user's system detects a breach in security, UltraSync conducts a series of responses that allow them to take quick action. Here's how it works:

1. Activity triggers the home system

2. Sensors report activity to UltraSync Ready panels
or UltraSync communicators

3. UltraSync Ready panels and communicators analyze the data and take action based on device configuration and programming:

 • Report alarms to monitoring centers

 • Trigger event-based video clips

 • Notify user's mobile device via push notifications or email

4. When the user logs into the UltraSync mobile app, the user credentials are forwarded to secure servers for authentication

5. Users are then able to remotely interact with their system to:

 • View live video

 • Retrieve stored event-based video clips for event or alarm verification

 • Manage system settings and event history

The result is safe, secure system management all from one, easy-to-use app
