# Increase your monitoring subscriptions

REMOTE MANAGEMENT

- Remote connection via web portal or configuration software, depending on the control panel (ATSx500-IP, xGen Connect, UCx40, ZeroWire)

- Secure connection via serial number (UltraSync control panel ID) with advanced AES encryption

- High-speed communications

- Access to partial or full control panel settings for arming/disarming/bypassing certain zones

- Availability reports

- Remote system diagnostics

CENTRAL MONITORING STATION

- **XTUN**-servers terminate the connections from the alarm panel. They are responsible for providing network connectivity between end-user applications, such as Alarm delivery, Mobile Apps and configuration software and the alarm panel.

- **CPROXY**-servers terminate video streams from video cameras.

- **API**-servers allow third-party systems to manage alarm panel configuration and retrieve management information from devices.

- The **WEB PORTAL** is a user interface that allows installers to remotely manage the alarm control panels that they have access to.

- **CS GATEWAY** transmits alarm messages to the remote monitoring station.

- Messages from the alarm control panel are encapsulated in the **XTUN** protocol and transmitted to the central remote monitoring station via the **CS GATEWAY**.

- **END-TO-END**-message receipt acknowledgments enable reliable and highly secure alarm transmission.

- The UltraSync cloud platform and remote monitoring team are connected via **IPSec**-protocol.

- The standard **load balancing** IP configuration is used to distribute the production load and guarantee system redundancy.

- **Remote configuration** can be carried out via the web portal or configuration software.

Central Monitoring Station

BENEFITS

ULTRASYNC PORTAL FOR CENTRAL MONITORING STATIONS AND INSTALLERS
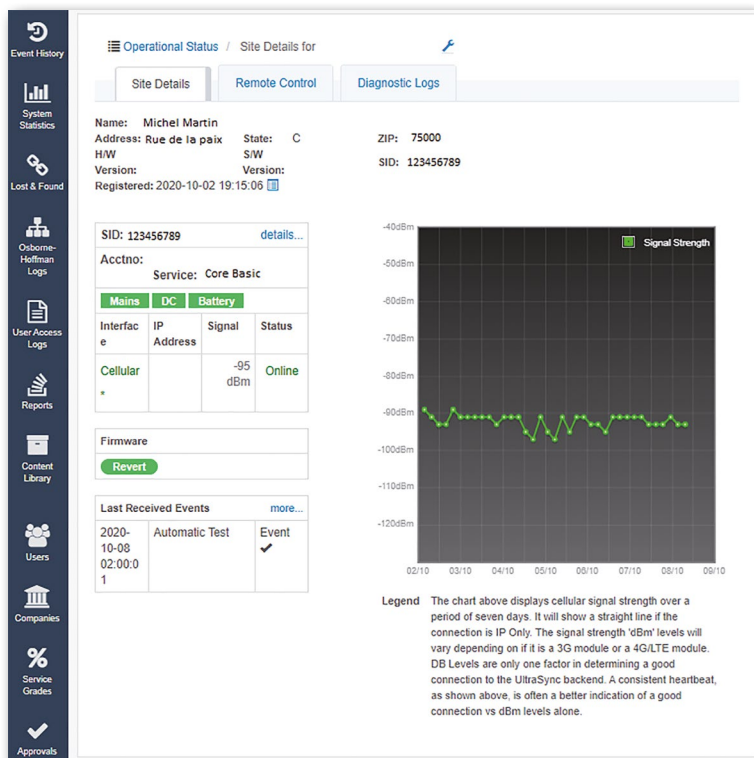

- Remote device management and diagnostics
- Communications management and diagnostics
- OTA firmware upgrade and programming*
- Secure architecture
- User and business management
- Service level configuration and management

OTA (Over The Air) is a technology that allows remote access to data on a SIM card

ULTRASYNC+ APPLICATIONS (XGEN, ZEROWIRE, UCX40)*
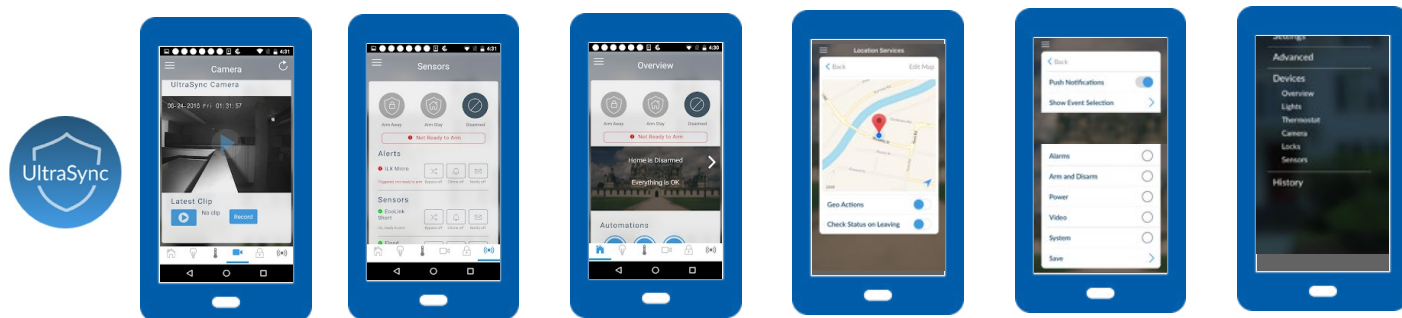

Using Z-Wave protocol via UltraSync+ apps
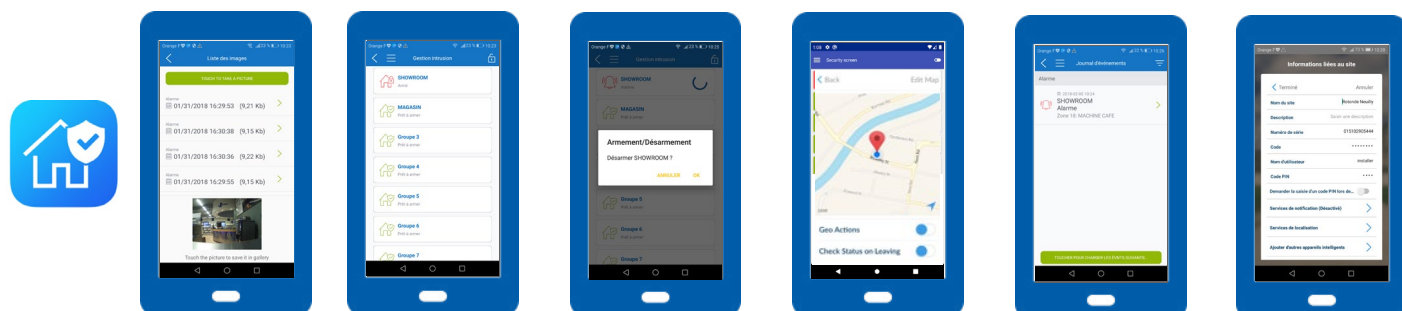

| Live and recorded camera streams | Sensor status | Arming/ Disarming | Location services | Notifications | Settings |

BENEFITS FOR CENTRAL MONITORING STATIONS

New Services

- Remote service activation
- Availability reports
- Diagnostics
- Remote connection to control panels for installers that do not have access to the central monitoring station's network
- Video verification solution*

According to the product line

Operations

- 24/7 network support
- Proactive SonicWall/SSL monitoring
- No major investment required (software or SonicWall receiver)
- No public IP addresses
- Installers and end users can access the control panels outside of the central monitoring station network if needed

Business opportunities
- Establish new connections
- Generate recurring income
- Ensure integration with management systems and other automation software

GETTING STARTED—CREATE AN ACCOUNT

Why do we collect this data?

- Simple, easily modified setup form
- Address used for sending the equipment
- Details of automation system used to prepare installation on portal
- Contact details collected for support purposes
- Teams carrying out 24/7 monitoring services review the details for contacting people as per the specified priorities

Core

- IP connection only
- Free for a limited number of self-monitoring or remote-monitoring control panels
- Polling using basic and EN Grade 2 configuration
- Device management
- Remote access
- Remote configuration (DLX900 and ATS85xx)
- Support for push notifications to smartphones

Enhance

- Aritech SIM included (up to 3 MB/month)
- For cellular and dual-path modes
- Self-monitoring and remote-monitoring modes
- Polling using basic and EN Grade 2 configuration
- Equipment management
- Remote access
- Remote configuration (DLX900 and ATS85xx)
- Support for push notifications to smartphones
- Cloud configuration (xGenConnect, ZeroWire, and UltraSync Communicators)

Elite

- Aritech SIM included (up to 15 MB/month)
- IP, cellular, and dual-path modes
- Polling using EN Grade 3 configuration
- Equipment management
- Remote access
- Remote configuration (DLX900 and ATS85xx)
- Support for push notifications to smartphones
- Cloud configuration (xGenConnect, ZeroWire, and UltraSync Communicators)
- Video alarm verification
- Diagnostic reporting

About Aritech

Aritech provides leading security and life-safety solutions for both commercial and residential applications covering intrusion, video, transmission and access. Offering some of the most-trusted product names in the industry, and backed by ongoing partner services and support, Aritech helps customers secure and protect what matters most. Aritech is a part of Carrier Global Corporation, a leading global provider of healthy, safe and sustainable building and cold chain solutions. For more information, visit aritech.com or follow us on LinkedIn @Aritech.
