LENEL·S2

Virtual Training Options for OnGuard Resellers and System Users

LenelS2 now offers OnGuard® VAR and System User certification courses via highly accessible and interactive Virtual Learning classes. **Live online training provides an excellent and convenient means for gaining knowledge and certification, especially while remote working is required, and travel restrictions are in place.** All the EMEA LenelS2 class modules are available, starting from the OnGuard Hardware and Software Fundamentals class, through to the Expert certification level.

Virtual training is available both for our Value-Added Resellers (VARs) and OnGuard System Users.

Our Virtual Learning Platform

Every participant has access to a robust virtual desktop via their browser and internet connection

Every class exercise can be followed by participants with real time assistance from the trainer or a producer, if needed

Every topic covered in our established classroom training is available via virtual learning

Every class provides time for questions and answer sessions via audio, or real-time chat

Every participant has private access to OnGuard software, hardware, and video streams to test realistic real-world scenarios

Every participant can join from any suitable PC with or without Admin rights

OnGuard VAR and End User training

- Introduction to Access Control*
- Access Control Hardware*
- OnGuard Fundamentals
- Professional-Access
- Expert-Access
- Professional-Intrusion
- Expert-Intrusion
- Professional-Data
- Expert-Data
- Professional-Video
- OnGuard Cluster Support
- System Administrator Specialist

Class schedules are available at www.lenel.com/training/class-calendar

LENEL·S2

Value-Added Resellers certification training

Using training pathways, the VAR programme can reflect the needs and abilities of participants, allowing them to build knowledge and skills at every step.

The journey starts with two optional self-paced online classes and then attendance on a live OnGuard Hardware and Software Fundamentals class. After each class there is an opportunity to demonstrate knowledge and understanding leading to certification.

Value-Added Resellers certification training pathways

| Introduction to Access Control* | Access Control Hardware* | OnGuard Hardware and Software Fundamentals |

OnGuard Associate Certification

| OnGuard Professional **Access Control** | OnGuard Professional **Intrusion** | OnGuard Professional **Data (IT)** | OnGuard Professional **Video** | OnGuard **Cluster Support** |

OnGuard Professional Certification

| OnGuard Expert **Access Control** | OnGuard Expert **Intrusion** | OnGuard Expert Data **(IT)** |

OnGuard Expert Certification

* Optional self-paced classes, all others are instructor led live virtual or classroom classes

There are five learning pathways available after gaining Associate Certification. All LenelS2 OnGuard VARs must have enough trained staff in each area relevant to their OnGuard projects and be able to meet their service level agreement responsibilities. Generally, all VARs need several certified Access Control staff - Associate Certification alone is not enough.

By completing three layers of a pathway, a participant can reach OnGuard Expert level certification. For example, to achieve Expert-Access certification; the individual needs to progress from OnGuard Associate, through to Professional-Access and then gain Expert Access certification. By completing two layers a participant can reach OnGuard Professional certification.

Pathways beyond Associate certification

Access Control	Intrusion	Data	Video	Cluster
Participants go beyond the entry level information provided in the Fundamentals class. Includes OnGuard Enterprise deployment and Biometrics.	Covers implementation of intrusion scenarios built within the OnGuard Access Control solution and integrated EN50131 Intrusion Panels.	Provides vital knowledge for merging OnGuard with the system user's IT structure. Also required for LenelS2 support of OnGuard Cloud edition.	Covers the deployment and know-how to exploit the power of OnGuard video for live and forensic event-driven analysis.	Includes the deployment of OnGuard into NEC Express Cluster and Microsoft Server Cluster solution. Training focuses on implementation and maintenance.

System user training

In addition to the certification pathways and custom classes (that can cover any aspect of OnGuard), we offer a User OnGuard System Administrator Specialist class. This contains selectable content to suit participant preferences.

Ordering information

All class reservations can be made by designated VAR training administrators using the Partner Centre. Class schedules are available on the training calendar found on the LenelS2 website. Please consult the LenelS2 Global Educational Services chapter of the current price book for SKU and prices or request a quotation.

Course topics are subject to change without prior notice. Specific terms and conditions apply to LenelS2 training in EMEA.
