

# Advisor Advanced Pro app

Security in the palm of your hand

# Control your security system from your phone.

The Advisor Advanced Pro app offers the convenience and security to access your Advisor Advanced intrusion panels from your device.

End users and supervisors can perform routine tasks like arming and disarming the system, as well as administrative tasks like assigning cards to new users.

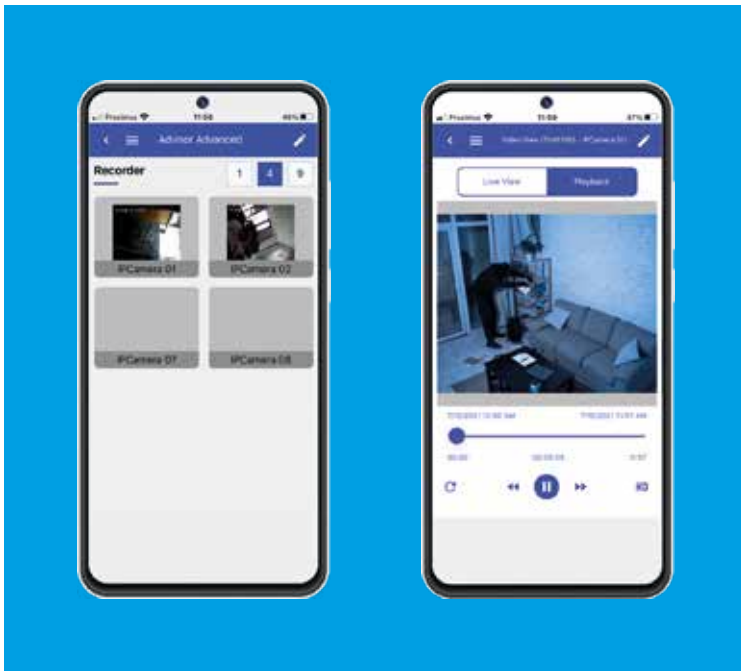

Get to know the features and benefits of the Advisor Advanced app and discover 10 reasons why it offers you an easy, secure, 360 view of your installation.

# Why would you choose the Advisor Advanced Pro app?

1

**Video integration**, the latest addition to the app: see what's going on at all times, giving you peace of mind that your premises are secure

Is everything ok at your premises? Did the alarm go off for a technical reason, or is there really an intruder? You don't have to keep wondering anymore. With Advisor Advanced Pro app you can connect to the TruVision recorder at your premises, see livestream and recorded videos to validate what your intrusion system reports to you!

## Features

- Connect to TruVision recorders and cameras
- Adjust your video dashboard – 1/4/9 view
- See live stream and playback videos

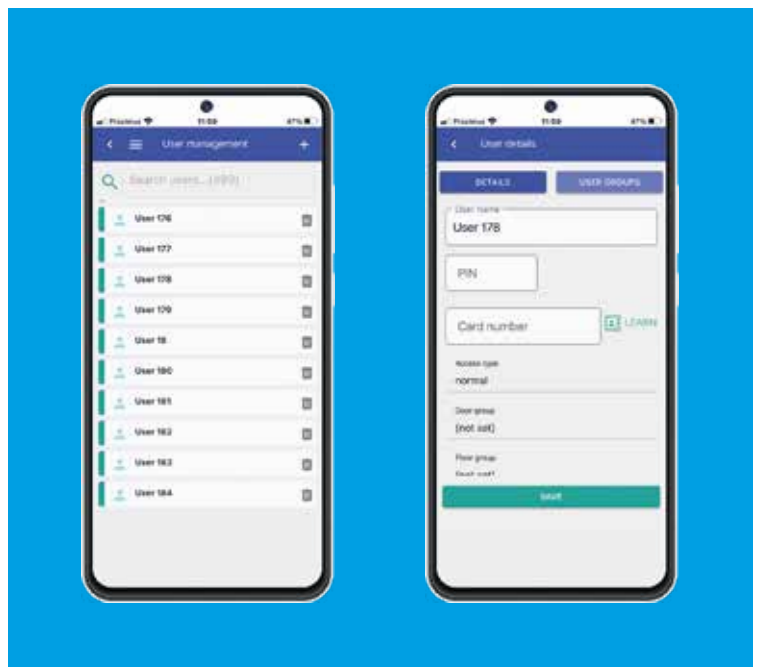

2

**User Management function**, to monitor the teams' access

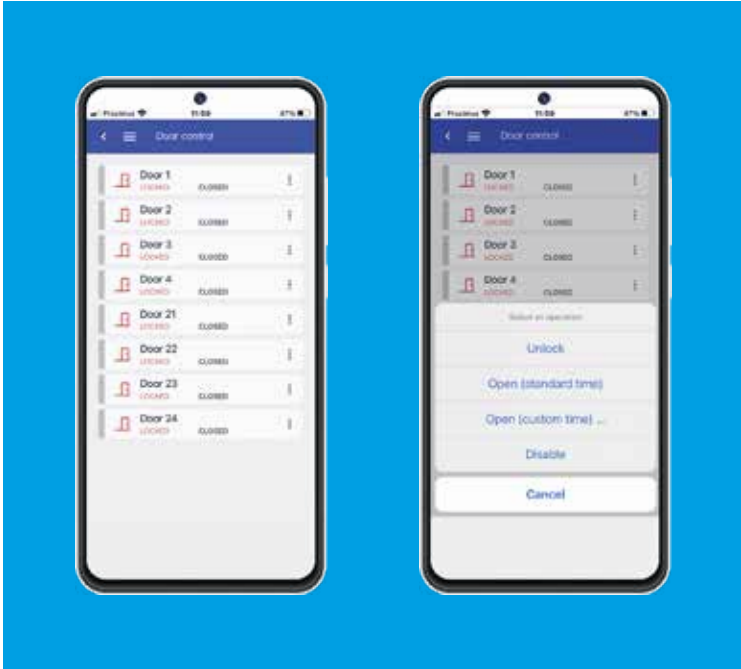

Did someone in your team forget their PIN? Is there a new team member who requires access? No problem, you can perform these daily tasks on your phone wherever you are.

## Features

- Add, edit, and remove users
- Learn-in card for users
- Assign users to user groups
- Change PIN
- And all the other user management functions in the system, except editing user group details.

### 3 Door Control: to have full visibility and control over the doors with your mobile device

Is there a specific event that requires access to certain areas at different times to normal? Did you forget your badge and need to open a door? Are you sure the backdoor is closed? Advisor Advanced Pro app can be used to unlock door and help you to manage your premises quickly and easily..

#### Features

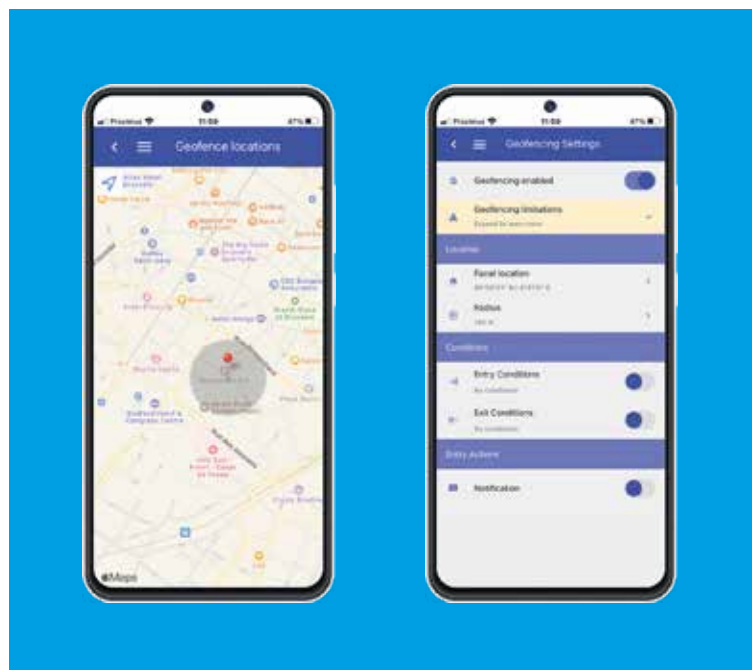

- Manage standard doors on the panel (extended doors and doors on controller will be added in future releases)
- Open, unlock, lock, inhibit and un-inhibit doors
- See the actual status of a door
- Manage a door at a time

### 4 Geofencing: farewell, your premises are safe!

Do you often leave home and forget to set the alarm? Let the Advisor Advanced Pro app take care of that for you. Configure your app to send you a notification if you left home without setting your system or ask it to set it automatically once you are away. Similarly, you can ask your app to turn on the lights in the hallway if you are approaching home, so that you are not entering your building in the dark.

#### Features

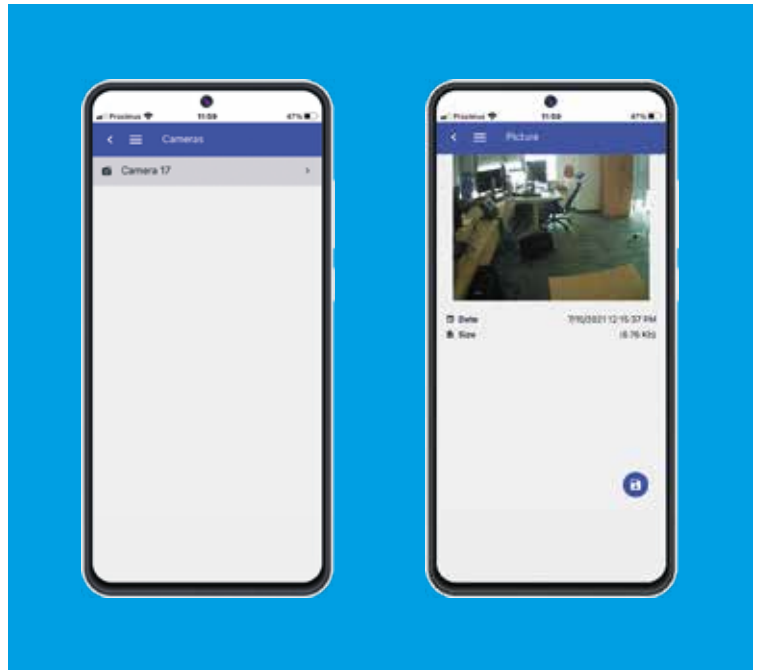

- Set a panel location on maps, and add sensitivity (50m, 100m, 200m etc.)
- Add a "if this than that" logic, triggered by the location of the app. Here are some examples:
- Send me a notification if I leave home when the system is unset
- Lock the backdoor if I leave home and the system is set
- Unlock the garage door if I am approaching home

## 5

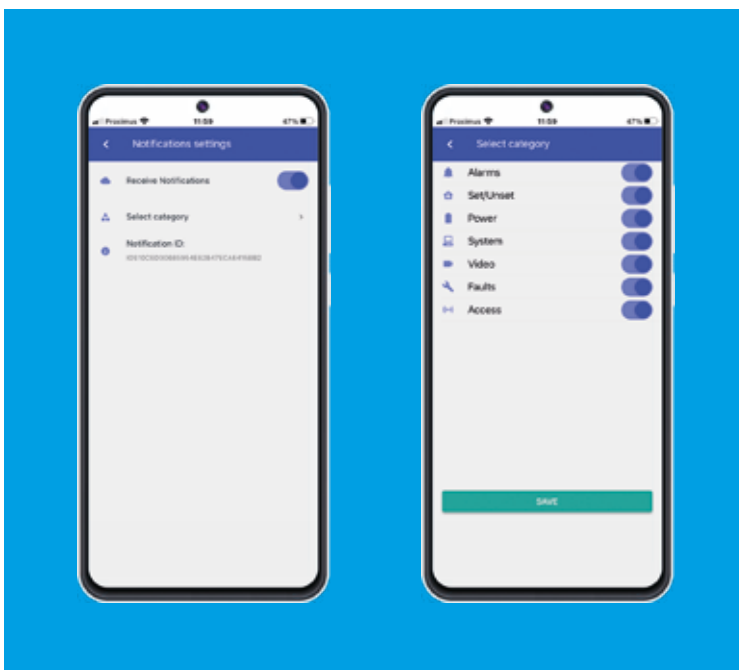

### Alarm Validation through PIRcams : see it immediately and take action

If you are using PIRcams, you can receive alarms on your phone and check the images at the same time as receiving the alarm. This way, you can validate the alarm on your phone, without the need of any other software or device.

## 6

### Push Notifications : always be informed

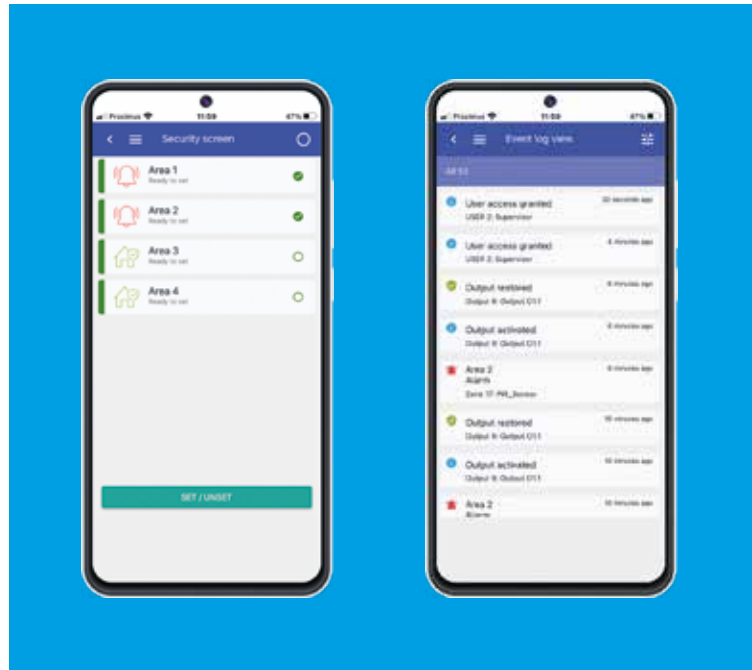

With **UltraSync** push notifications, receive alarms, faults and events in your phone. If you only want to know if there's an alarm or a fault, you can choose so. You also might want to know if users access the premises (for example, after hours), giving you the opportunity to act accordingly.

## 7 Intrusion System Control: control your smart devices

Perform all your daily operations like setting the system on your phone.

### Features

- Set, unset, part set, inhibit zones
- View event log

## 8 Cyber Security: a system you can trust

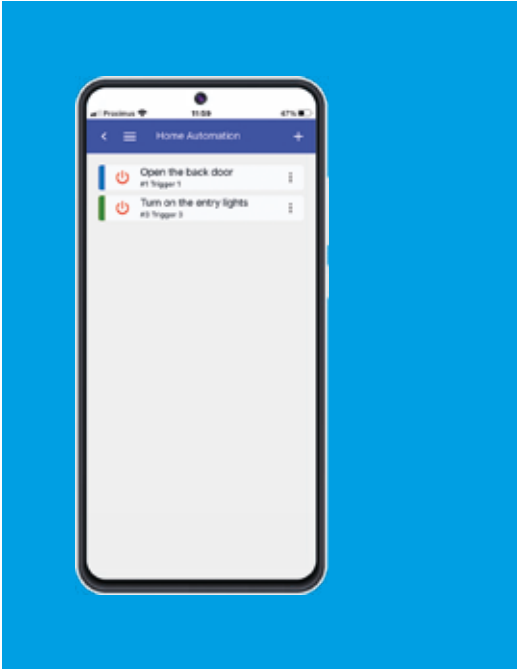

Advisor Advanced ecosystem received NFA2P Cyber Certification “3 Shields” (maximum level) for a complete system, including the Advisor Advanced control panel, the UltraSync communication protocol, as well as its software and Mobile apps. We make sure that our entire ecosystem is protected against increasing cyber threats.

## 9

### Home Automation: take the commands of your smart devices

Intrusion alarm systems are hardly the only smart devices you have at home! With the app, you can command other devices that can be triggered by Advisor Advanced panel.

The most common interface between Advisor Advanced panel and other devices is a relay, which switches on or off the other device, or bridges the input of the other device. With Advisor Advanced Pro App, you can control your outputs, and trigger your filters.

You can also link these triggers to geofencing events. The panel and app combination helps you to turn on the heating when you are coming back home from work or turn off the lights when you are away.

## 10 Easy to connect!

Among many other options to connect the app to your panel or to your recorder, we offer UltraSync connectivity. In the UltraSync identifiers of your panel or recorder you can add your device to your app.

### Connectivity options

- Panel: UltraSync, Direct IP, Safetel
- Recorder: UltraSync (in next release), ezDDNS, Direct IP

# Advisor Advanced Pro App Specifications

Supported panels	<ul style="list-style-type: none"> <li>• Advisor Advanced x000A panels – 21.21.109 or newer (direct IP only)</li> <li>• Advisor Advanced x500A panels – MR1.0 or newer (for direct IP), MR4.0 or newer (for UltraSync)</li> </ul>
Supported recorders	<ul style="list-style-type: none"> <li>• TruVision TVR 10, 11, 40, 41, 42, 44, 45, 46, 60 digital video recorders</li> <li>• TruVision TVN 10, 11, 20, 21, 22, 50, 70, 71 network video recorders</li> <li>• All TruVision cameras</li> </ul>
