EXCELLENCE

SmartCell Gateway

Your **Gateway** to Wireless **EXCELLENCE**

What if one gateway could unlock smarter fire safety,
without rewiring everything you've built?

Imagine expanding a fire detection system without
disruption.

Imagine a wireless system, fully integrated with your
Excellence Protocol.

Now... imagine that gate opening.

Meet EXCELLENCE SmartCell Gateway

Your gateway between the **Addressable KIDDE Commercial system** and **SmartCell Wireless Devices**

Unlock the full potential of your building's fire detection system by linking wireless SmartCell with the Kidde Commercial Addressable System.

Adding the Wireless Gateway allows you to create a hybrid system, combining wired and wireless devices for maximum scalability and flexibility.

The Power Behind EXCELLENCE SmartCell Gateway

At the core of SmartCell Gateway is simplicity—built for complex needs.

32 SmartCell devices per Gateways with up to 4 Gateway per loop

Up to 4 Loop powered gateways with integrated short circuit isolation

Fully integrated with the Addressable Excellence Panel

Intuitive SmartCell Navigation and Survey for quick install

Third party certified to EN54 17, 18 & 25

Add a mix of wireless SmartCell devices and Wired Excellence Series devices to the Kidde Commercial panel

The Gateway connects wirelessly to up to 32 SmartCell devices and links to the Excellence panel by wire.

This means you can combine wired and wireless in one system, making installation faster, more flexible, and easier to scale, without sacrificing performance.

One protocol. One system. Total integration.

FOR EVERY ENVIRONMENT

Historic buildings. Modern extensions. Hard-to-wire spaces.

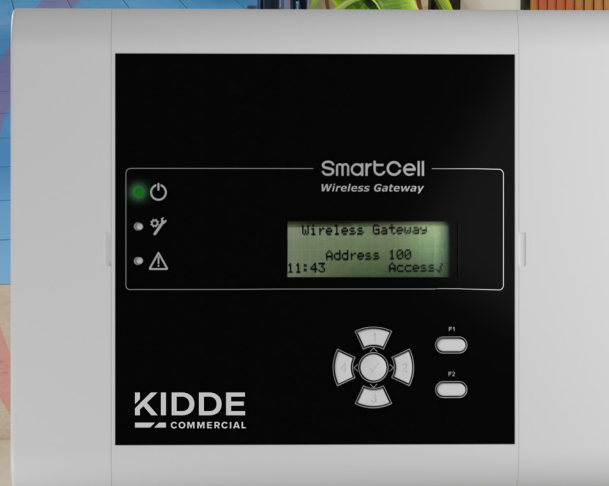

EXCELLENCE SmartCell Gateway excels where traditional solutions fall short.

It brings reliable fire detection to places that were once impractical or cost-prohibitive to protect—reducing disruption and preserving building integrity. Whether it's a retrofit, a new build, or an evolving site, this is fire safety that fits in.

No limits. Just possibilities.

The EXCELLENCE SmartCell Gateway gives you the freedom to design smarter systems with less disruption, lower costs, and more control.

I/O Modules

I/O modules offer DIN or wall mounting, pluggable connectors, integrated short circuit isolation, local testing with LED indicators per channel.

Manual Call Points

Featuring Dual tri-colour status LEDs, test keys, resettable/frangible elements, and optional integrated short circuit isolation.

Wireless Gateway

With full integration with the Excellence Series, the Gateway is loop-powered, supporting up to 32 SmartCell devices per gateway, and allowing for 4 gateways per loop and enabling rapid installation.

Wireless SmartCell devices

The wireless SmartCell devices offer full integration with the Kidde Excellence Series. They are compact yet packed with features, allowing for rapid installation. SmartCell devices feature low-cost battery replacement and EN-54 third-party certification.

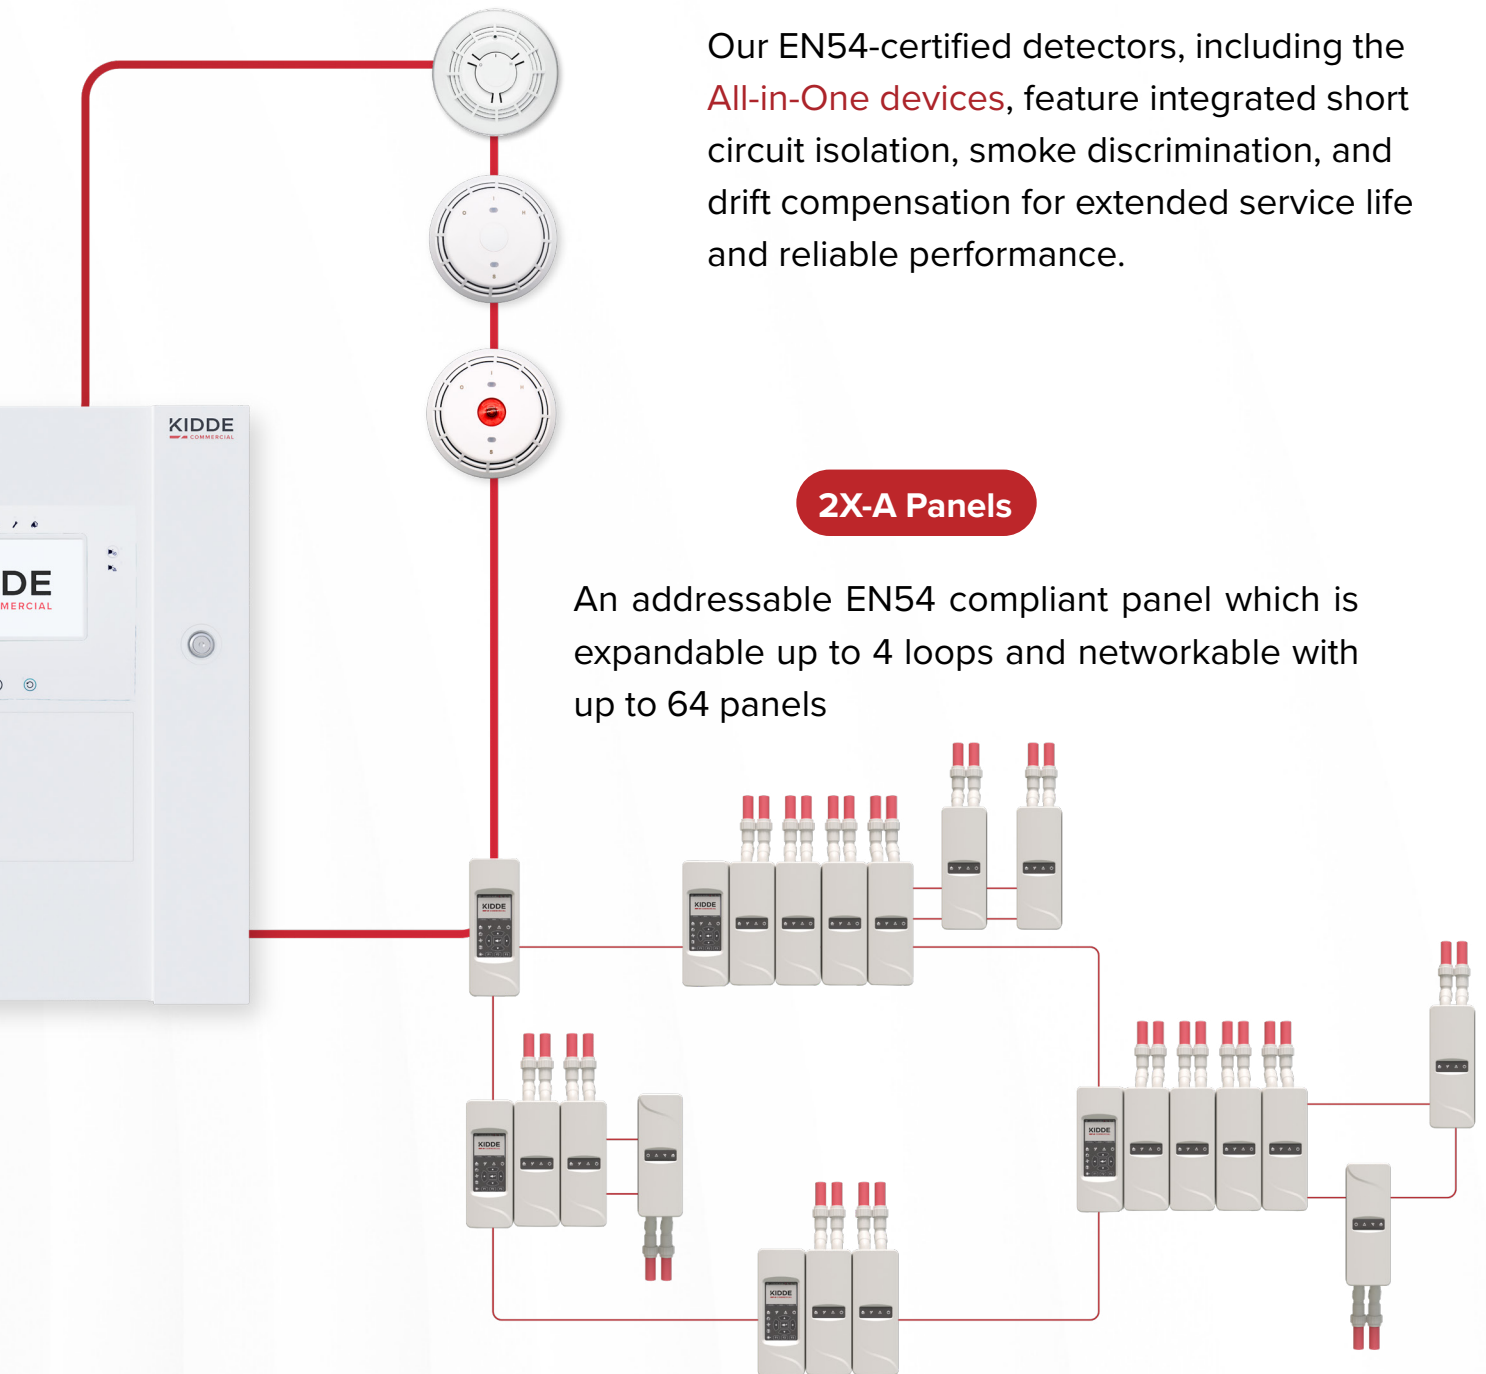

Excellence Series Detectors

Our EN54-certified detectors, including the **All-in-One devices**, feature integrated short circuit isolation, smoke discrimination, and drift compensation for extended service life and reliable performance.

2X-A Panels

An addressable EN54 compliant panel which is expandable up to 4 loops and networkable with up to 64 panels

Aspiration Smoke Detection

Delivering highly sensitive and reliable early smoke detection. Engineered to perform where traditional detection struggles, our ASD range overcomes challenges such as dust, humidity, stratification, and harsh conditions.
