

# TruVision TVK-600 Operator Guide: DVR by IP Mode

## Introduction

This guide explains how to simulate the functionality of the recorder's front panel using the TVK-600 keypad.

The DVR by IP mode is one of four modes available in the keypad that can be used to control devices. This guide only describes how to use the DVR by IP mode. There are separate operator guides for the other modes.

See Table 1 below for the list of devices that are supported by the *DVR* by *IP* mode.

Table 1: List of TruVision devices supported by DVR by IP mode

TVN 21	TVR 16
TVN 22	TVR 45HD
TVR 15HD	TVR 46

**Note**: TruVision non PTZ IP cameras and encoders are not supported by this mode except as an input.

# Before you start

Before you can control the recorder's front panel with the keypad, you first need to tell the keypad which devices to control.

Every device added to the keypad must have a unique ID. You need to tell the keypad the specific recorder/decoder, monitor, and camera that you want to control.

You enter the ID of the recorder or decoder (DEV), then that of the monitor (MON), and then that of the camera (CAM) to be controlled. This ID information is provided by your manager.

**DEV**: The ID of the recorder or decoder you want to control.

**MON**: This is the ID of the monitor you want to control.

**CAM**: This is the ID of the camera you want to control.

Important! Before you start using the keypad to control devices, ensure that you have received from your manager the list of device IDs that you will be using and that they are categorized by recorder/decoder (DEV), monitor (MON), and camera (CAM). You also should receive the list of multiscreen (MULT) formats available for each recorder that you can control.

**Note**: The text in the keypad's LCD screen is only available in English.

# **Controlling devices**

#### To control a recorder's front panel:

 Power-up the keypad and press the button on top of the joystick to get the login screen. Enter your name and password to log in to the keypad.

**Note**: In the Login dialog box, if you enter the wrong password five times, you will be locked out for 30 minutes.

2. Press the MODE button on the keypad.

The LCD display lists the four keypad operation modes to control devices (see Figure 1 on page 2).

1. Keyboard	
2. DVR by IP	
3. DVR by RS-485	
4 Dome by RS-485	

- Press the numeric button 2 or press PREV/NEXT to scroll up/down the list, to select DVR by IP and press OK.
- 4. This screen appears:

DEV :	
KEY:	

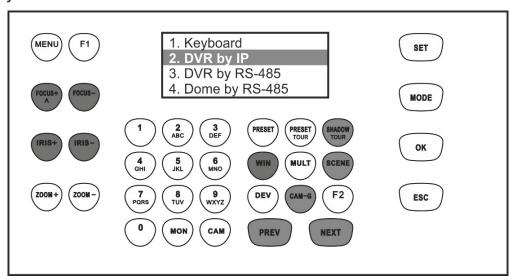

To select your device, enter the ID number of the recorder or decoder to control and then press the

- **DEV** button. The number appears beside DEV on screen.
- There is no KEY button on the keypad. This text stands for "Keyboard buttons". You need to enter both the monitor and camera IDs here.
  - Enter the ID of the desired monitor and press the **MON** button.

Then enter the ID of the desired camera and press the **CAM** button. These two sets of numbers appear beside KEY on screen.

- Select the desired multiview format. Enter the
  multiview number and then press the MULT button.
  The multiview display settings available depends on
  the recorder. Your selected multiview setting is seen
  on the monitor. See the complete list of settings for
  the MULT button in Table 2 below.
- You can now start to control the recorder with the keypad. See Figure 1 and Table 2 below for the description of how to use the keypad buttons to control the recorder.

Figure 1: DVR by IP mode

Buttons shown in white can be used in DVR by IP mode.

Table 2: How to control a recorder using DVR by IP mode

Numeric button	Keypad button	Action
N	DEV	Press the numeric button of the desired recorder ID and this function button to select the recorder.
N	MON	Press the numeric button of the desired monitor ID and this function button to select the monitor.
