AAE-TEST

TEST KIT FOR AAE LHD RANGE

Overview

The AAE EN Analogue Sensor Cable Test Kit provides users with a practical and safe method of verifying the operational performance of Alarmline II EN Analogue Sensor Cable post-installation.
Testing is recommended to be undertaken periodically to ensure correct operation of the system. The functional test must be carried out on 1-3% of the total sensor cable length, which should have been made accessible during the system design and installation as per the manufacturer's recommendations.
A functional test is straightforward to be undertaken and a test kit can be re-used where necessary.

Product information

Each AAE EN Analogue Sensor Cable Test Kit contains:

1 x 120V/240Vac to 50Vac Power Supply Unit
1 x ProMinder Red Cable for zone lenghts between 50m to 125m
