KE-VA

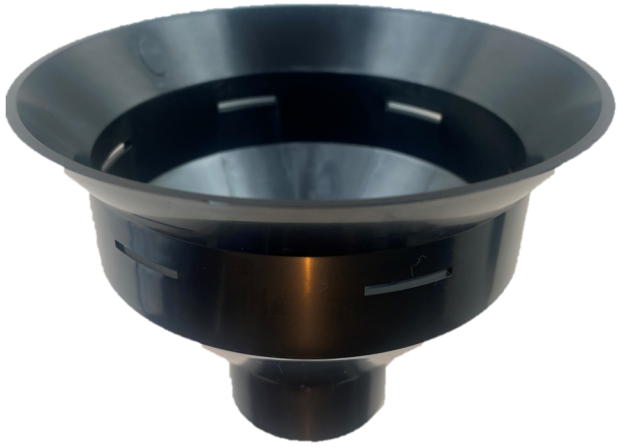

Excellence series detector cleaning tool

General

The KE-VA is a detector cleaning tool used to clean Excellence series detectors using a conventional vacuum cleaner.

Operation

The KE-VA connects to a 1.5- inch (3.8 cm) suction hose/extension tube of a conventional vacuum cleaner. When placed over the detector, loose dust and debris is removed by creating a high velocity vortex scrubbing action around the detector.

Details

- Connects to a standard conventional vacuum cleaner
- Quick & easy detector cleaning
- May be used with all Excellence series detectors
